DEDON

Seat & Back Cushion Construction

Why our upholstery is 100% suitable for outdoor use

All our cushions that are equipped with the Dry+ specification include a water-resistant interlayer. This interlayer has a much better performance than inside-coated fabrics, as tested and approved by certified test laboratory in Germany. Our DEDON upholstery is highly water-resistant and breathable at the same time.

Water column of water-resistant interlayer 10.000 mm

What does it mean?

The water entry pressure test, or hydrostatic pressure test, is a simple procedure to determine resistance to water penetration under hydrostatic pressure. The test is defined by an ISO standard. Water is applied to one side of the interlayer and the pressure steadily increased until water penetrates the material in three places. The result shows the resistance of the interlayer to the penetration of water. The rating is expressed in millimeter of water pressure and abbreviated to mm H₂O. Retailers typically refer to the number of mm of “water column” or even mm of “waterproofness”.
