

FRAME CONSTRUCTION & Options

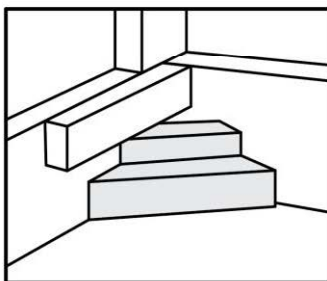

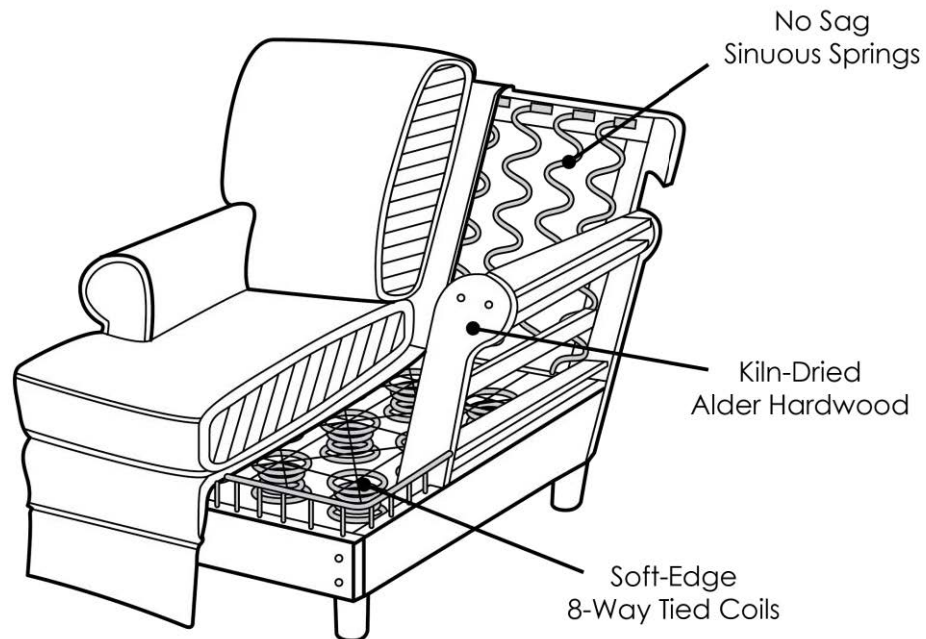

We build hand-crafted heirloom furniture

The comfort you experience with a piece of furniture is dependent upon its design and construction. Cisco Brothers manufactures high quality upholstery renowned for its style, durability and comfort.

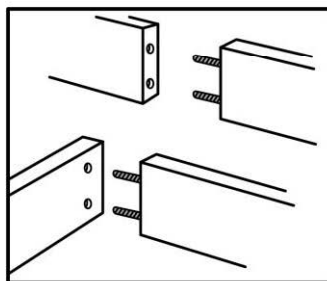

Our Product is all made to order and comes in a wide variety of custom features detailed below, including options in frame construction, cushion fill, as well as our exclusive Inside Green™.

Frame Construction

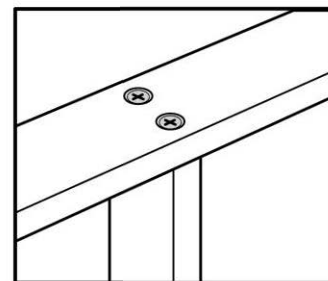

All of our frames are constructed in Los Angeles with FSC-Mixed Certified kiln dried hardwoods, mainly Alder and Maple. We reinforce our frames with double doweled stress joints, counter sunk screws, and corner blocks. All of our wood is 100% domestic lumber. Our frames are each made to specification with your choice of seating support. We build each support option into the frame, we do not use pre-manufactured drop in support boxes.
