

SEATING SUPPORT & Options

Cisco Brothers offers four seating options to meet specific seating and comfort preferences.

No-Sag

The No-Sag seating support system is robust and versatile. Technologically speaking, it is simple, consisting of 8-gauge sinuous springs stretched in an arch fashion and laterally mounted every 3 to 4 inches along the length of the chair or sofa. Two 8-gauge runners are mounted side-to-side, providing additional reinforcement.

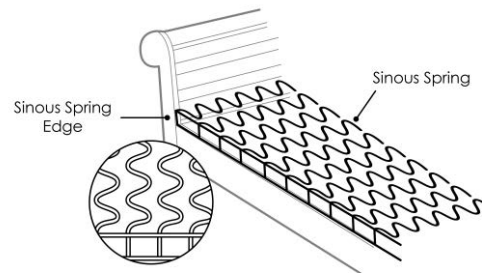

Examples: *Cosmo, Renata*

Soft-Edge

The Soft-Edge seating support system is very similar in principal to the No-Sag system, with the support provided by springs laterally mounted along the length of the chair or sofa and reinforced side-to-side. Soft-edge offers the added benefit of a row of vertically mounted springs that allow for flexibility along the front edge of the sofa or chair.

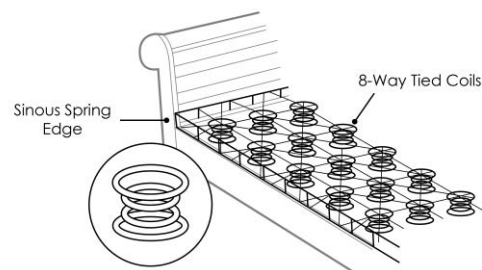

Examples: *Seda, Loft, Hayden*

8-Way Hand-Tie

8-Way Hand-Tie is our most comfortable seating support system. It consists of 8-gauge support coils secured and individually hand-tied eight ways to the frame. Each coil has an independent range of motion for maximum support. Most furniture manufacturers use pre-assembled, drop-in, 8 way hand-tied units which are bolted to the frame. At Cisco Brothers, all 8-way support systems are hand tied into a FSC-Certified Maple hardwood frame. This is a labor intensive activity, ranging from two to three hours per sofa. Eight-way hand tie seating always includes Soft-edge front support.

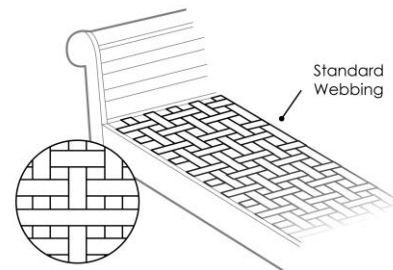

Examples: *Genevieve, Luccia, Edith*

Webbing

This construction consists of bands of Webbing weaved throughout the seat, back & frame. Webbing is made from both natural and man-made fibers. This is a standard used in several models, as well as the Inside Green™ construction.

Examples: *Dexter, Madden, Kardell*

Inside Green

Our Inside Green standard support is Jute webbing. This construction consists of bands of Jute webbing weaved throughout the seat, back & frame.
